

Commercial Data Redistribution — Requirements Brief

Prepared for the Polygon.io (Massive) Market-Data Licensing / Commercial team

Product / applicant	MarketCatalyst — a retail financial-intelligence web application
Legal entity	[Company legal name — fill in]
Contact	hello@inc108.com [name / phone — fill in]
Website	[product URL — fill in]
Date	14 July 2026
Requested action	Written confirmation that our intended display of Polygon-sourced data to end users is permitted under a commercial redistribution agreement, plus the correct plan & pricing.

1. Purpose & intent

We are building a public, subscription-based retail financial website — comparable in scope to **Finviz** and **Alpha Vantage** — that presents US market data to **non-professional retail investors**. We intend to license market data from Polygon.io (Massive) and are seeking your team's written confirmation that our intended use (displaying Polygon-sourced data to our end users inside our product) is covered by a commercial redistribution / "Polygon for Business" agreement, together with guidance on the correct plan for our needs. This brief lists exactly what Polygon data we require and how it will be shown, so your team can verify the request and confirm we may proceed.

2. Product & redistribution model

- **Platform:** responsive web application (with a companion mobile app).
- **Audience:** registered **non-professional retail** investors. Free tier plus paid subscription tiers.
- **How data is presented:** processed and visualised inside the product — live index/ticker strip, price charts, movers tables, sector heat-maps, a stock screener, watchlists / portfolios, and news headlines.
- **What we will NOT do:** we do not resell raw data feeds, provide a data API to third parties, or offer bulk data downloads. Data is cached transiently server-side purely to render our own UI.
- **Indicative scale:** universe of ~10,000 US-listed equities & ETFs plus major indices; [expected users — fill in]; [est. requests/day — fill in]; real-time updates via WebSocket for the live ticker strip and quotes.

3. Polygon data products required

All items below are **US equities / ETFs, US index values, or equity news**. Latency column: **RT** = real-time needed; **Delayed** = 15-min delayed acceptable; **Static** = reference/historical.

Data product	Polygon API (cluster / endpoint)	Latency	Where it is displayed in the product	Pri
Real-time last trade / quote (price, change, volume, VWAP)	Stocks — Snapshot, Last Trade/Quote, WebSocket	RT	Ticker strip, Stock Detail, Portfolio, Watchlist	P0
Aggregate bars — OHLCV (min/hour/day/week; 1D–5Y)	Stocks — Aggregates (Bars)	Delayed / RT intraday	Charts (Stock Detail, Sector Themes, Recaps), post-earnings reaction	P0

Data product	Polygon API (cluster / endpoint)	Latency	Where it is displayed in the product	Pri
Full-market snapshot & Gainers / Losers (~10k tickers)	Stocks — Snapshot (All Tickers, Gainers/Losers)	RT	Market Movers, Heat-map, Screener, full-market table	P0
Reference data — ticker universe, ticker details (market cap, shares/float, SIC/sector), search	Stocks — Reference: Tickers, Ticker Details	Static	Screener universe, search autocomplete, market-cap tile sizing	P0
Index values — DJIA, S&P 500, VIX, ETF proxies (SPY/QQQ/IWM), 10Y & 2Y Treasury yields	Indices — Snapshot, Aggregates	RT	Market Pulse strip, VIX widget, yield curve, Recaps index returns	P0
Equity news (headline, summary, source, URL)	Stocks — Ticker News	RT	Commentary/News feed, Stock Detail, News drawer	P0
Technical indicators — RSI, MACD, SMA/EMA (or computed by us from Aggregates)	Stocks — Technical Indicators	Delayed	Screener technical filters, Stock Detail	P0/ P1
Corporate actions — splits & dividends	Stocks — Reference: Splits, Dividends	Static	Split-adjusted charts, dividend context	P1
Market internals — advance/decline, new highs/lows	Stocks — derived from Snapshot	RT / EOD	Recaps market-internals panel	P1

4. Scope — Polygon vs. other vendors

So your team can scope our request precisely, the following is **in scope from Polygon**; everything else in our product is licensed from other providers.

IN scope from Polygon	US equities & ETFs (quotes, OHLCV, snapshots), US index values (incl. VIX), equity news, reference data & corporate actions.
OUT of scope (other vendors)	Options chains / Greeks / flow (Tradier, Unusual Whales); fundamentals, earnings & analyst estimates (FMP, Benzinga); insider & 13F filings (SEC EDGAR); macro-economic calendar (Finnhub / FRED); AI narratives (Anthropic).
Note	No OPRA / options data is required from Polygon — our options data is sourced elsewhere, so no options-exchange licensing is needed on the Polygon agreement.

5. Delivery & technical

- **Access methods:** REST (historical, snapshots, reference) + **WebSocket** (real-time streaming for the live ticker strip and quotes).
- **Caching:** data is stored transiently server-side to render our UI and reduce call volume; it is not redistributed as raw datasets.
- **Expected volume:** [peak requests/min — fill in], [concurrent WebSocket connections — fill in].

6. Confirmations we are requesting from Polygon

1. Confirm we may **display Polygon-sourced real-time US equity & index data to our non-professional retail end users** on a public, subscription-based commercial website, under a commercial / redistribution agreement.
2. Identify the **correct plan & licence** (e.g. Advanced real-time + Commercial-Use / Business terms) and whether our use is classified as “redistribution”.
3. Confirm the **non-professional user** classification for our audience and whether any **per-user professional / exchange fees** apply.
4. Confirm **index-value display rights** (incl. VIX and S&P 500) — and whether any separate index-provider licence (Cboe / S&P Dow Jones) is required or is covered by Polygon.
5. Confirm **news display / redistribution rights** for Polygon news content shown to end users.
6. Confirm any **rate-limit, request-volume, or display-scope** constraints for a ~10,000-ticker screener / heat-map and for WebSocket streaming.
7. Confirm any **attribution requirement** (e.g. a “Powered by Polygon” credit).
8. Provide **pricing** for the above at our scale, and confirm whether launching with **15-minute delayed** data changes the licence or cost.

7. What we need to proceed

In one line: please confirm that **MarketCatalyst is cleared for commercial redistribution (display to end users) of the data listed in Section 3**, tell us the **plan, pricing, and any attribution requirement**, and flag anything above that needs a separate agreement — so we can sign and integrate.

Confidential — prepared for Polygon.io (Massive) licensing review. Data mapping derived from the MarketCatalyst screen & feature specification (17 screens, 116 data points). Scale figures marked “fill in” to be completed before sending.
