

Market Data Requirements — Vendor RFQ

MarketCatalyst — the data feeds the app needs, described vendor-neutrally for quotation

Send this to any market-data vendor. **Lat.:** RT/DLY/EOD/STAT. **Pri:** P0/P1/P2. **Get:** Buy / Calc (in-house). **Data %** = share of total data volume. **Free?:** **Free** = in-house or public-domain/gov source (SEC EDGAR, FRED, US Treasury, FINRA); **Paid** = commercial vendor required. Feeds that are partly free are split into a **free row** and a **paid row**. (Free public data is usually EOD and needs parsing — not real-time.)

Free vs paid — split by data volume

~33% of data volume is FREE · ~67% is PAID

The 6 partly-free feeds are now separated into their free and paid halves. **Free (~33%)** = in-house calculation (~8%) + public-domain / government sources (~25%: SEC EDGAR, FRED, US Treasury, FINRA, BLS/BEA). **Paid (~67%)** = real-time quotes, OHLCV, snapshots, indices, news, analyst ratings, options, transcripts, and the paid halves of the split feeds (estimates, forward calendars, clean feeds).

Category	Data %	Feeds
Free — in-house calc	~8%	movers, sector, market status, ratios, analyst consensus
Free — public / gov	~25%	financial statements, short interest, splits, treasury yields, insider F4, 13F + free halves (profile ref, earnings actuals, dividends declared, IPO filings, econ actuals, congressional raw)
TOTAL FREE	~33%	(no vendor payment required)
Paid — commercial	~67%	quotes, OHLCV, snapshot, indices, news, analyst ratings, options, guidance, transcripts, peers + paid halves (profile market, earnings estimates, dividend yield, IPO forward, econ estimates, congressional clean)

Caveat: "Free" public data is commercially usable but usually **EOD / delayed** and requires **parsing & hosting** (esp. SEC EDGAR). Real-time quotes, options, indices, news and analyst content have no free commercial source — those drive most of the paid ~67%.

Commercial & delivery terms to quote against
