

I am a investor currently use brifing.com to

1. Get the earnings details quickly
2. Live market details
3. Updates to the stocks I own
4. Market movers - ups and downs
5. Upgrades/Downgrades
6. Overall market summary
7. 13F filings
8. Earnings calendar and earnings movers
9. Story stocks
10. At the end of the week - Weekly movers (ups and downs)
11. Weekly summary of what happened in the market

I also use <https://earningshub.com/> to get better clarity and UI on what stocks are announcing the results today/this week and how are they faring

I also use market surge from IBD to know which group the stock is, what are its peers and how they are performing

Some of the gaps I see are

1. <https://www.briefing.com/> UI is boring
2. earningshub.com UI good but not great.
3. Toggling between multiple tools.

I want to build a product, and cater to the audience on a subscription basis that combines all of them. Some additional features I think are

1. AI powered summary of the earnings
2. AI powered summary of the 13F for top-5 funds
3. Learn a quick
4. Add market pulse, macro economic details, block trades, options activity
5. Add a widget about VIX
6. "What matters now" summary card.
7. What happened in the market today summary - EOD and also the stocks that moved today with why
8. User can get AI powered technical analysis on their portfolio or a particular stock
9. Some features can also be inspired from <http://aibuildouts.com/>

Here are the product specifications organized by feature, designed for high-density scannability and quick implementation.

Here is the full product specification, rewritten in clean plain-English bullet format organized strictly by feature — ready to hand to your engineering team.

Product Overview

- **Product goal:** A single subscription platform that replaces Briefing.com, Earnings Hub, and MarketSurge for active investors who need live market intelligence, earnings research, analyst actions, 13F tracking, and peer/group context in one workflow.
 - **Core question every screen must answer:** What is moving, why is it moving, what is scheduled next, and what does it mean for my portfolio.
 - **Three usage modes the product supports:**
 - Intraday monitoring: live feed, movers, alerts.
 - Event-driven research: earnings, analyst actions, options, story stocks.
 - End-of-day and weekly review: recap, digest, weekly movers, fund intelligence.
 - **Target users:**
 - Active retail investors who monitor earnings and analyst actions daily.
 - Swing and position traders who care about sector/group strength and catalysts.
 - Portfolio investors who want alerts and concise summaries without reading every transcript or filing. [Memory](#)
-

Feature 1 — Home Dashboard ("What Matters Now")

- The first screen the user sees after logging in is a personalized intelligence dashboard.
- **"What Matters Now" card (top of screen):**
 - 5–10 bullet points summarizing the most important developments right now.
 - Covers macro, index moves, sector rotation, key earnings, analyst actions, and user portfolio names.
 - Updates automatically throughout the session.
- **Market Pulse strip (always visible at top):**
 - Shows S&P 500, Nasdaq, Dow, Russell 2000, VIX, 10-year yield, crude oil, gold, dollar index, and bitcoin with real-time price and percentage change.
 - Each item is color-coded (green/red) and clickable to a detail view.
- **Customizable widget grid:**

- User can pin, remove, and reorder widgets.
 - Available widgets: Earnings Today, Top Movers, Portfolio Alerts, Analyst Actions, VIX Level, Macro Events Today, Story Stocks, Unusual Options.
 - Default layout is pre-set for a new user; can be saved and restored.
 - **Session filters:**
 - Tabs across top of dashboard for: Today, Premarket, Live, After Hours, This Week, My Portfolio.
 - Selecting a tab filters all widgets and the live feed to that session context.
-

Feature 2 — Earnings Workspace

- The earnings workspace is one of the two primary product pillars. It should be faster, cleaner, and more informative than Earnings Hub. [Memory](#)

Earnings Calendar

- Views: Today, Tomorrow, This Week, Next Week, Custom Date Range.
- Each earnings row displays:
 - Ticker, company name, report time (before open / after close), market cap bucket, sector, industry group.
 - EPS estimate, EPS actual, EPS surprise percentage.
 - Revenue estimate, revenue actual, revenue surprise percentage.
 - Guidance status (raised / lowered / maintained / not provided).
 - Post-report price reaction in percentage.
- Tag pills on each row indicate: Beats EPS, Misses Revenue, Raises Guide, Lowers Guide, Inline, Mixed, High Short Interest, Large Move, Options Active.
- User can sort by: report time, price reaction size, EPS surprise size, sector, market cap, options activity, and whether the name is in their portfolio or watchlist.
- User can filter by: before open, after close, sector, large cap only, options active, transcript available.
- Portfolio and watchlist names are highlighted with a colored indicator in every row.

Earnings Detail Panel

- Opens as a right-side drawer or modal without leaving the calendar view.
- Contains:
 - Headline metrics: EPS actual vs estimate, revenue actual vs estimate, EPS surprise %, revenue surprise %.
 - Guidance summary: what management said, up/down/flat direction.
 - Price reaction: current move, after-hours move, 5-day move.
 - Revenue and EPS history chart (last 8 quarters).

- Earnings transcript (paginated, keyword searchable).
- Call audio player (if available).
- Latest news headlines (last 24 hours).
- Peer reactions: which peers moved in sympathy, with direction and size.
- AI earnings summary (see Feature 3).

Earnings Setup Card (Pre-Announcement)

- Before earnings are posted, each scheduled stock shows a setup card with:
 - Implied move (derived from options market).
 - Last 4 earnings reaction sizes.
 - Analyst sentiment trend (upgrades vs downgrades in last 30 days).
 - Peer performance heading into the announcement.
 - Key questions for the quarter based on prior guidance and news themes.

Earnings Movers Board

- Automatically lists stocks with the largest post-earnings moves today and this week.
 - Columns: ticker, price reaction, direction, beat or miss, guidance, sector, and whether it's in the user's portfolio.
-

Feature 3 — AI Earnings Summary

- Generated automatically within minutes of earnings results or transcript availability.
 - Structured output for every earnings event:
 - **What happened:** 2–3 sentence plain-English headline.
 - **Beat or miss:** EPS and revenue verdict with context.
 - **Guidance:** what changed, by how much, and what management said verbatim.
 - **Management tone:** positive, cautious, or mixed based on transcript language.
 - **Segment highlights:** top business segments and their performance.
 - **Risks mentioned:** what management flagged or analysts cited as a concern.
 - **Investor reaction explained:** why the stock is up or down in plain English.
 - **What to watch next quarter:** the 2–3 things that will determine the next reaction.
 - A one-line investor takeaway at the top: Bullish, Cautiously Bullish, Neutral, Cautious, or Mixed.
 - A confidence label on the AI output and a direct link to the transcript section the summary came from.
 - A disclaimer that this is AI-generated informational content, not investment advice.
-

Feature 4 — Live Market Feed

- A real-time scrollable feed similar in purpose to Briefing's intraday market updates, but redesigned as visual categorized cards.[Memory](#)
 - Powered by WebSockets; target latency under 1 second from event ingestion to display.[Memory](#)
 - Each feed item is tagged by category: Macro, Index Move, Sector Move, Earnings, Analyst Action, Story Stock, Options, Block Trade, Fed/Rates.
 - Every feed item includes a "Why it matters" line in plain English — not just a raw headline.
 - Feed filter tabs: All Market, My Portfolio, My Watchlist, Earnings, Analyst Actions, Macro.
 - Feed supports pinning important items and marking them as read.
 - **Before the Bell briefing:** A pushed summary available by 8:30am covering futures, overnight news, macro events today, and earnings before open.
 - **After the Close briefing:** A pushed summary available within 30 minutes of market close covering final index performance, top stories, and what is scheduled for the next day.
-

Feature 5 — Market Movers Board

- A dedicated screen showing market movers across multiple views.
 - Available view tabs: Top Gainers, Top Losers, Unusual Volume, Gap Ups, Gap Downs, High Relative Volume, Large-Cap Movers, Weekly Movers.
 - Each mover card shows:
 - Ticker, price, percentage change, dollar change.
 - Volume vs 30-day average volume (shown as a ratio: e.g., 4.2x).
 - Catalyst label (earnings, analyst action, news, macro, no known catalyst).
 - Peer reactions: are related stocks moving too?
 - Technical context: above or below 20-day, 50-day, or 200-day moving average.
 - Whether the name is in the user's portfolio or watchlist (highlighted).
 - User can filter movers by: index membership (S&P 500, Nasdaq 100, Russell 2000), sector, industry group, market cap, price range, float, and session (premarket, regular, after hours).
 - **Weekly Movers page:**
 - Listed on Fridays and available through the weekend.
 - Shows top 10 up and top 10 down names for the week.
 - Each includes a short catalyst explanation.
-

Feature 6 — Analyst Actions Board

- A real-time board of all upgrades, downgrades, initiations, reiterations, and price-target changes.
 - Each analyst action row shows:
 - Ticker, company name, analyst firm.
 - Previous rating, new rating (with a direction arrow).
 - Previous price target, new price target.
 - Implied upside or downside from current price.
 - Time of publication.
 - Stock price reaction since the action (updated intraday).
 - Number of analyst actions on this stock in the last 30 days.
 - User can filter by: upgrade only, downgrade only, initiation, price target change only, major banks, names in portfolio, names in watchlist.
 - **AI note on each action:**
 - Short paragraph explaining whether this action is likely to be meaningful.
 - Factors considered: size of target change, firm importance, direction of trend, how crowded the analyst view already is.
-

Feature 7 — Portfolio and Watchlists

- Users can create portfolios and watchlists manually (broker import is Phase 2).
- **Portfolio page:**
 - Lists owned names with: current price, day change, position size bucket (small/medium/large), cost basis, gain/loss.
 - Each name shows: next earnings date, last analyst action, recent price move, unusual options flag, and latest news headline.
 - **Portfolio Pulse card (daily):**
 - Automatically generated each morning and updated at close.
 - Tells the user in plain English what changed in their holdings today and why.
 - Flags which names had a material event (earnings, analyst action, unusual move) overnight or today.
- **Per-holding settings:**
 - User can add conviction level (high/medium/low), cost basis, a personal note, and alert preferences per position.
- **Alert options per holding:**
 - Earnings announcement.
 - Large post-earnings move.
 - Analyst upgrade or downgrade.
 - Unusual options activity.
 - Volume spike (user sets threshold).
 - Price move above or below user-defined level.
 - Peer sympathy move.

- 52-week breakout or breakdown.
 - 13F ownership change for tracked fund.
-

Feature 8 — Stock Detail Page

- The central research page for any stock, accessible by clicking a ticker anywhere in the product.
- **Page sections:**
 - **Chart:** interactive price chart with selectable time ranges, overlaid with earnings events, analyst actions, and volume.
 - **Key stats:** market cap, P/E, revenue, EPS, margins, shares outstanding, short interest, next earnings date.
 - **Earnings history:** last 8 quarters of EPS and revenue actuals vs estimates, with price reaction for each.
 - **Analyst actions:** recent upgrades, downgrades, and price targets in a small table.
 - **News:** latest 10 headlines with timestamps.
 - **Peers:** see Peer View below.
 - **Industry group:** see Group View below.
 - **Institutional ownership:** top 10 holders, recent changes, 13F overlap with tracked funds.
 - **Options activity:** unusual options flags from the last 5 sessions.
 - **Block trades:** notable block trades in the last 5 sessions.
 - **AI technical analysis:** see Feature 9.

Peer View

- Shows the 5–10 closest peers based on sector, industry group, and business model.
- Peer table columns: ticker, price change today, 1-week performance, 1-month performance, market cap, next earnings date, analyst rating consensus, and valuation snapshot.
- A "who is leading the group" indicator highlights the strongest peer based on recent relative strength.

Group View (MarketSurge-style)

- Shows the industry group the stock belongs to, ranked against all other industry groups.
- Displays: group rank, group trend (improving, deteriorating, flat), strongest names in the group, weakest names in the group, recent group-level news, and group-level analyst activity.

- Users can click the group name to open a full group page with all members and performance.
-

Feature 9 — AI Technical Analysis

- Available for any stock on the stock detail page and for any portfolio holding.
 - User can choose tone: Short Summary, Swing Trader View, Position Trader View, Long-Term Investor View.
 - Output includes:
 - Trend direction and strength.
 - Key support and resistance levels (with price values).
 - Moving average posture: is the stock above or below the 20, 50, and 200-day?
 - Relative strength behavior vs the S&P 500 over 1 month and 3 months.
 - Volume behavior: is accumulation or distribution dominant?
 - Recent breakout or breakdown context.
 - Upcoming event risks (earnings, macro) that could affect the setup.
 - Output is labeled "AI-generated technical analysis for informational purposes only, not investment advice."
 - Source data used to generate the output is listed below the analysis.
-

Feature 10 — 13F Intelligence

- A dedicated section for tracking what top institutional funds are buying and selling.
- **Fund tracker:**
 - Default list of the top 5 most-followed funds (Berkshire Hathaway, Pershing Square, Tiger Global, and similar — final list to be defined).
 - Users can add additional funds to track.
 - Funds are sourced from SEC EDGAR 13F-HR filings.
- **Per-fund page:**
 - Current holdings table with columns: ticker, shares held, market value, percentage of portfolio, and change from last quarter (added / reduced / exited / unchanged / new).
 - Top 10 holdings concentration.
 - Sector breakdown pie.
 - Filing date and the quarter the filing covers.
- **13F changes view (quarterly digest):**
 - New positions: stocks the fund bought for the first time.
 - Added: existing holdings where shares increased.
 - Trimmed: existing holdings where shares decreased.

- Exited: holdings fully sold off.
 - Unchanged: no change.
 - **AI 13F summary (per fund, per quarter):**
 - What changed overall this quarter.
 - Biggest new buys with brief context.
 - Biggest exits with brief context.
 - Theme shift (did the fund rotate sectors?).
 - Concentration change (is the fund more or less concentrated?).
 - Which of these stocks overlap with the user's portfolio.
 - **Cross-fund views:**
 - "Most owned across tracked funds" — stocks held by 3 or more tracked funds.
 - "Most sold across tracked funds" — stocks exited or trimmed by 3 or more funds.
 - "Only one fund owns this" — high-conviction single-fund positions.
-

Feature 11 — Macro Dashboard and VIX Widget

- A macro dashboard for users who monitor economic context.
 - **Macro calendar:**
 - Lists upcoming economic events: CPI, PPI, jobs, FOMC, GDP, retail sales, consumer confidence, housing starts.
 - Columns: event name, date, time, importance tier (high/medium/low), previous value, estimate, actual (once released), market reaction.
 - Defaults to current week; switchable to next week and last week.
 - **Market regime label:**
 - A single-label widget that describes the current tape: Risk-On Rally, Narrow Rally, Defensive Tape, Inflation Scare, Growth Scare, Rate-Sensitive Rally, or Risk-Off.
 - Based on market internals, yield behavior, and sector rotation. Updated daily.
 - **VIX widget:**
 - Current VIX level and day change.
 - VIX percentile rank over the last 12 months.
 - Trend direction (rising, falling, flat).
 - A one-sentence plain-English explanation: "VIX at 28 is elevated and historically corresponds to heightened short-term market stress."
 - **Recent macro releases:**
 - Last 5 macro events with actual vs estimate, direction arrow, and market reaction.
-

Feature 12 — Options Activity and Block Trades

- **Unusual options activity board:**
 - Shows large or unusual options trades flagged by volume vs open interest ratio.
 - Each row: ticker, call or put, strike, expiry date, premium paid, contract size, total value, volume vs open interest ratio, direction flag (bullish / bearish / unclear).
 - Each row links to the stock detail page.
 - Filters: calls only, puts only, sweeps only, expiry range, minimum premium size.
 - **Block trades board:**
 - Shows large single equity trades that suggest institutional activity.
 - Each row: ticker, trade value, number of shares, price, price vs VWAP (above or below), time, and direction context (aligns with or contradicts today's price move).
 - Filters: minimum trade size, sector, session.
 - Both boards link to news, earnings proximity flag, and peer activity.
-

Feature 13 — Story Stocks

- A curated section for stocks with an active market narrative.
 - Stories are triggered by: major product news, earnings blowout or disaster, activist investor activity, short squeeze conditions, takeover chatter, regulatory decision pending, guidance reset, or strong thematic momentum.
 - **Each story stock card includes:**
 - What the story is (1–2 sentences).
 - Why the market cares.
 - What changed today.
 - Next catalyst or resolution date.
 - Which peers, ETFs, or sectors are also affected.
 - Stories are manually curated or AI-tagged based on news cluster density and price/volume behavior.
-

Feature 14 — End-of-Day Recap

- Automatically generated each trading day within 30 minutes of market close.
- **Recap content:**
 - Index performance: final levels and percentage changes.
 - Sector performance: heatmap-style ranking with leaders and laggards.
 - Market internals summary: advancers vs decliners, new highs vs new lows.
 - Key stories of the day: top 3–5 narratives with brief explanation.
 - Biggest earnings movers.
 - Biggest analyst actions.
 - Macro events that moved the market.

- What is scheduled for tomorrow (earnings before open, macro events, Fed speakers).
 - Delivery options: article view in-app, bullets view in-app, 60-second audio summary, and email digest.
 - User can set preferred delivery time (e.g., auto-send at 5:00pm).
-

Feature 15 — Weekly Recap

- Generated every Friday evening, covering the full trading week.
 - **Weekly recap content:**
 - Index performance for the week.
 - Sector winners and laggards.
 - Top macro events and their impact.
 - Biggest earnings stories of the week.
 - Most significant analyst actions.
 - Weekly top movers (up and down, with catalyst).
 - Themes that emerged or strengthened this week.
 - What to watch next week: earnings calendar, macro events, and key dates.
 - Available in the same delivery formats as the EOD recap.
 - A "This week for my portfolio" tab inside the recap shows only portfolio-relevant events.
-

Feature 16 — Alerts and Notifications

- The alerting system is a core product differentiator.
- **Delivery channels:** In-app notification center, email (always); SMS and push notifications in Phase 2.
- **Alert types available:**
 - Earnings results posted.
 - Post-earnings move exceeds threshold (user sets, default 5%).
 - Analyst upgrade or downgrade.
 - Unusual options activity flagged.
 - Block trade above user-defined value.
 - Price move above or below user-defined level (intraday or daily close).
 - Volume spike above threshold (user sets, default 3x average).
 - 52-week breakout or breakdown.
 - Macro event released (user can subscribe to specific events).
 - Peer sympathy move above threshold.
 - 13F filing published for a tracked fund.
 - Industry group enters or exits top 20 by relative strength.

- **Alert format:**
 - Short, personalized, and actionable.
 - Example: "NVDA earnings just posted — beats EPS by 12%, raises guidance. Stock +8% AH. See summary."
 - Not a raw headline dump.
 - **Alert management:** User can enable, disable, edit, and group alerts per holding or per event type.
-

Feature 17 — AI Assistant ("Market Copilot")

- A chat-style AI assistant embedded in the product that can answer questions using live product data.
 - The assistant has access to: live market data, earnings results and transcripts, analyst actions, 13F filings, macro calendar, and the user's portfolio and watchlist context.
 - **Example prompts the assistant handles:**
 - "What matters for my portfolio today?"
 - "Summarize this week's semiconductor earnings."
 - "Which of my stocks had analyst changes this week?"
 - "What did Berkshire buy this quarter?"
 - "Compare TSLA's earnings reaction to its peers."
 - "Is the market risk-on or risk-off right now?"
 - Every AI answer cites the source modules it used inside the product so the user can click through and verify.
 - The assistant clearly labels all output as informational, not investment advice.
-

Feature 18 — Learn in 60 Seconds

- Contextual educational micro-cards that appear when the user lands on relevant pages.
- Topics are triggered by context: landing on 13F page triggers "What is a 13F?", landing on earnings detail triggers "Why guidance matters more than EPS", viewing VIX widget triggers "What VIX levels mean."
- Each card is under 60 seconds to read and includes one real example.
- Cards can be dismissed permanently or saved to a learning library inside the user's profile.

UI Components (Engineering Build List)

- Global top navigation bar with: SVG logo, global search, session filter, market status pill, alert bell badge, dark/light mode toggle, and user avatar/profile menu.
- Left navigation rail with: Dashboard, Earnings, Movers, Analyst Actions, Portfolio, 13F, Markets, Stocks, Recap, Settings.
- Market ticker strip: horizontal scrolling bar at top showing all indices, VIX, yields, and commodities.
- Summary card component: used for "What Matters Now," Portfolio Pulse, EOD Recap, Macro Watch.
- Dense data table: sortable columns, sticky header, saved column views, export to CSV.
- Earnings row component: all fields listed above, with tag pills, portfolio highlight, and expand-on-click.
- Detail drawer: right-side panel (70% width on desktop, full screen on mobile) for earnings detail, stock detail, analyst action detail.
- Sparkline chart: tiny inline chart used in tables and movers cards.
- Tag pill component: reusable colored pill for catalyst types, ratings, and statuses.
- Peer comparison matrix: side-by-side table of peers with performance, earnings, and valuation.
- Sector/group heatmap: color grid of sectors and industry groups by performance.
- Audio player: compact player for earnings call recordings and recap audio.
- Transcript viewer: paginated text viewer with keyword search and AI summary side-by-side.
- Alert rule builder: modal to create, configure, and save an alert with filters and delivery preferences.
- AI chat panel: floating or right-docked panel with conversation thread, source citations, and context selector.
- Widget grid: drag-and-drop dashboard layout with resize and pin/unpin controls.
- VIX widget: standalone component with level, percentile, trend, and plain-English label.
- Watchlist chip: small badge on any ticker row indicating portfolio or watchlist membership.
- Mobile bottom tab bar: 5-tab navigation for Dashboard, Earnings, Movers, Portfolio, Alerts (Phase 2).

APIs and Data Sources (Engineering Reference)

Data Need

Recommended Vendors

Real-time quotes, OHLCV, indices	Polygon.io, Twelve Data, Finnhub
News and headlines	Benzinga, Finnhub News, Intrinio
Earnings calendar and actuals	Financial Modeling Prep, Intrinio, Benzinga
Earnings transcripts	Motley Fool Transcripts API, Refinitiv, Intrinio
Analyst ratings and targets	Benzinga, Intrinio, Financial Modeling Prep
13F filings	SEC EDGAR (free), EDGAR full-text search API
Macro and economic calendar	Finnhub Economic Calendar, Intrinio, Trading Economics
Options flow and unusual activity	Unusual Whales API, Market Chameleon, Tradier
Block trade data	Polygon.io Trades, Intrinio
Company reference and fundamentals	Financial Modeling Prep, Intrinio
Sector and industry group data	Financial Modeling Prep, Intrinio, Polygon

[Memory](#)

Subscription Tiers

- **Free:** delayed data, limited movers view, daily recap (read-only), limited watchlist (5 names), no AI features.
- **Pro (\$X/month):** real-time data, full movers board, AI earnings summaries, AI technical analysis, analyst actions, portfolio watchlist with alerts, macro dashboard, VIX widget, EOD and weekly recap.
- **Premium (\$X/month):** everything in Pro plus 13F intelligence with AI summaries, unusual options activity, block trades, AI assistant (Market Copilot), audio recaps,

expanded alerts, industry rotation alerts, and weekly deep recap with portfolio view.[Memory](#)

MVP Scope (Ship First)

- Dashboard with "What Matters Now" card and market pulse strip.
- Earnings calendar with earnings detail drawer and AI earnings summary.
- Market movers board.
- Analyst actions board.
- Portfolio/watchlist with basic alerts.
- Stock detail page with peer view and group view.
- End-of-day recap.
- Weekly recap.
- VIX and macro calendar widgets.[Memory](#)

Phase 2

- 13F intelligence with AI summaries.
- Options activity and block trades boards.
- Audio recap and earnings call playback.
- AI Market Copilot assistant.
- Mobile app with push alerts.
- Broker import for portfolio.
- Industry rotation alerts.
- Social sharing of recap cards.[Memory](#)

GEMINI GENERATED REQUIREMENTS

Live Pulse Feed & Terminal

- **Real-Time Streaming:** Sub-second delivery of macro headlines, block trades, and "story stock" narratives via unified WebSockets.
- **Contextual Explanations:** Integrated "Why It's Moving" micro-summaries attached to assets experiencing unusual volume or price spikes.
- **Command Bar Navigation:** A global keyboard utility (**Cmd + K**) allowing users to instantly filter the feed, look up tickers, or shift layouts without using a mouse.

Upgrades & Downgrades Matrix

- **Actionable Data Tables:** Filterable dashboard tracking analyst changes, displaying Firm Name, Action (Upgrade/Downgrade/Initiate), Old/New Ratings, and Price Target differentials.
- **Visual Sentiment Indicators:** Subtle color-coded micro-badges (emerald green for positive revisions, crimson for downgrades) to allow instant visual scanning.
- **Non-Disruptive Flyouts:** Clicking an analyst action opens a right-side drawer containing the asset's mini-chart and immediate industry peers, keeping the main feed active.

Intraday & Weekly Market Movers

- **Volume-Filtered Gainers/Losers:** Real-time tracking of top percentage movers, filterable by a Relative Volume multiplier (e.g., volume exceeding $2\times$ the 50-day moving average).
- **Automated Summaries:** Periodic end-of-day and end-of-week rollover states summarizing the market's overarching technical structure.
- **Cumulative Weekly Reports:** A dedicated weekend view charting the net weekly percentage change and net institutional fund flows for top market drivers.

Visual Earnings Hub

- **Kanban Calendar Board:** A grid layout organized by day of the week, clearly divided into Before Market Open (BMO) and After Market Close (AMC) sessions.
- **Performance Badges:** Visual cards containing corporate logos, estimated vs. actual figures, and instant visual mapping for EPS/Revenue beats or misses.
- **Reaction Tracker:** A live pre/post-market dashboard calculating asset price deviations compared to their historical average earnings moves.

Industry Group & Peer Engine

- **Dynamic Relative Strength Rankings:** Algorithmic categorization of equities into granular industry subgroups, updated and ranked continuously by relative technical strength.
- **Side-by-Side Peer Comparison:** Tabular matrices displaying a chosen stock alongside its direct industry competitors, comparing technical setups and basic fundamental growth rates.
- **2D Scatter Matrix:** A visual bubble-chart option mapping Relative Strength (X-axis) against EPS Growth Rate (Y-axis) to easily spot industry leaders.

Institutional Flow & 13F Tracker

- **Automated 13F Ingestion:** Scheduled parsing of SEC 13F filings to display quarterly institutional holding updates, sector entries, and total liquidations.
- **Co-Attribution Screener:** A multi-variable filter allowing users to input a custom group of elite funds and view assets being accumulated by multiple funds simultaneously.

Smart Extensions (Value Additions)

- **AI Transcript Cheat Sheets:** Instant, LLM-generated summaries of corporate earnings calls delivered within minutes of adjournment, highlighting *Growth Drivers*, *Headwinds*, and *Guidance Adjustments*.
- **Live Portfolio Pulse Check:** Multi-brokerage integration (via API aggregators like Plaid or SnapTrade) that allows a user to toggle the entire platform's feed to isolate *only* their owned assets and immediate industry competitors.
- **Industry Rotation Alerts:** Smart push and email notifications triggered when an entire industry subgroup dynamically enters or exits the market's Top 10 strength rankings.
